

Python ALA:- 3 Power of a Number:

- **Java code:**

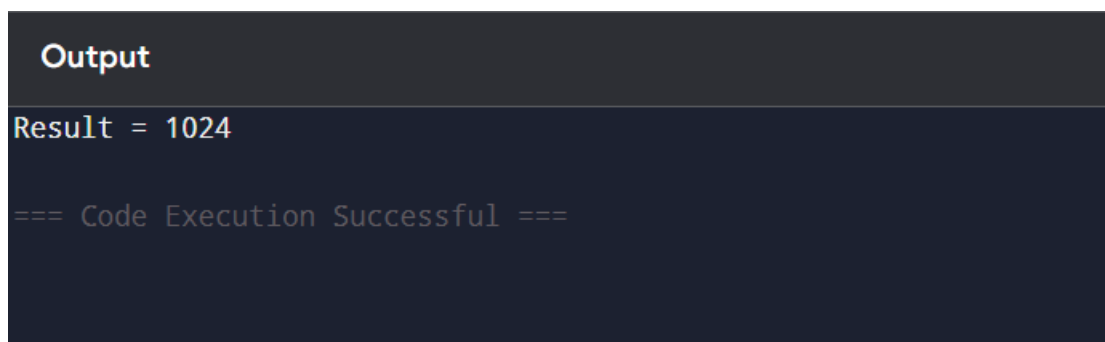

```
public class Main {  
    public static void main(String[] args) {  
        double base=2, exp=10;  
        System.out.println("Result = "+(int)Math.pow(base,exp));  
    }  
}
```

- **Python code:**

```
main.py  
1 base = 2  
2 exp = 10  
3 result = int(pow(base, exp))  
4 print("Result =", result)
```

- **Output:**

```
Output  
Result = 1024  
  
=== Code Execution Successful ===
```
